

**PharmaKB** ([www.pharmakb.com](http://www.pharmakb.com)) is a daily updated knowledgebase on research, business, and safety trends for all drugs in market or trials.

Professional leaders in pharmaceutical R&D and financial analysis employ this information to make better decisions about drug performance, risk, and financial opportunity.

### Reports

Reports are easily accessed from a browser application. The application provides search tools to select Reports of interest based on names, disease indications, biological target, company, and more.

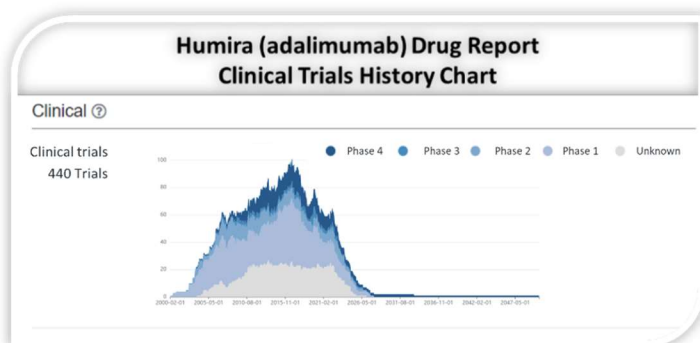

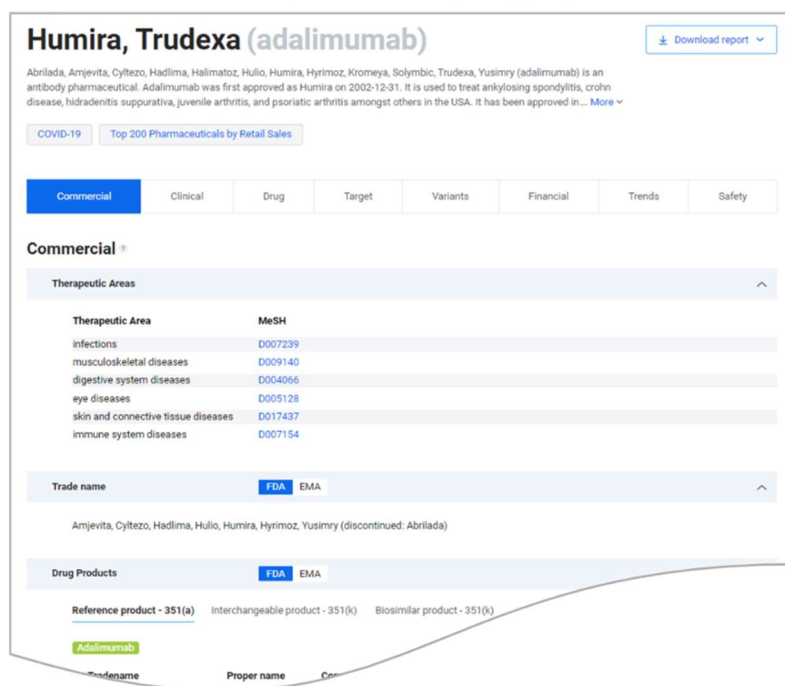

### Provenance

Information on all original source data is available via links within each report.

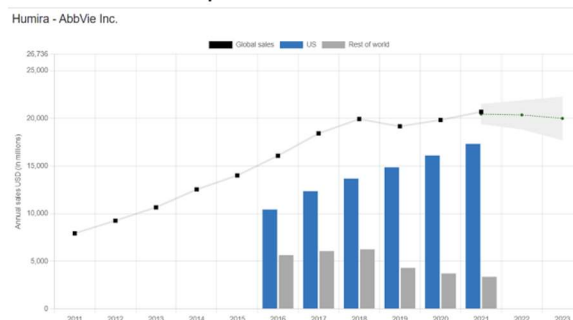

### Summary Charts

The system analyzes thousands of diverse public data records to produce easily interpretable trend charts and summary tables that may be downloaded for reuse.

Easy-to-navigate, dynamic reports are updated daily.  
Humira (adalimumab) Drug Report

Humira (adalimumab) Drug Report Reported Revenues

### Data Access via Download & API

All PharmaKB data and charts are available for download as JSON, CSV, EXCEL, PPT and API access is available using GraphQL to further analyze, integrate, or redistribute.

## PharmaKB Content Overview

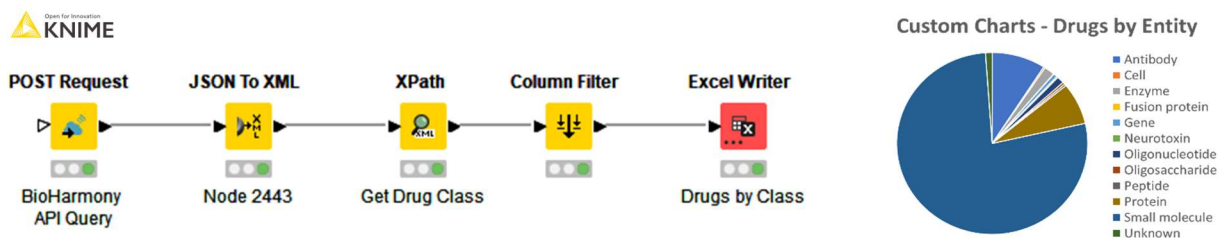

PharmaKB content is organized into 8 logical categories making it easy to identify and select the content you are seeking.

| Category                           | Description  |
|------------------------------------|--|
| <b>Commercial Profile</b>          | Manufacturers, commercial products, FDA reported patents and exclusivity timelines*, drug label information. |
| <b>Active Ingredient</b>           | Scientific names, molecular structure, technical description, common industry IDs and classifications.       |
| <b>Biological Target</b>           | FDA approved and alternative biological targets, mechanism of action, scientific names, and industry IDs.    |
| <b>Financial Performance</b>       | Publicly reported revenue performance for marketed drugs.  |
| <b>Drug Safety</b>                 | Black-Box Warnings and reported adverse drug reactions.  |
| <b>Clinical Trials</b>             | Comprehensive details on active and past clinical trials.  |
| <b>Genetic Variant Information</b> | Reported ClinVar IDTarget mutation and effect on patient outcomes.   |
| <b>Literature Trends</b>           | Trending MeSH terms coincident in the literature with drug terms.  |

\*Note that US FDA reported patent termination dates are not a guarantee of any rights to market.

## Integration Strategies

The PharmaKB JSON-formatted download files and API output are easily processed by popular data analytics tools, including KNIME and other low-code analysis systems.
